

# Chanakarn Susinraworn

## Full-Stack Developer

I'm a full-stack developer who loves creating web and mobile apps that are both efficient and user-friendly. With experience in modern tools like React, TypeScript, and Java, I enjoy solving problems and building solutions that make things run smoothly.

## Experience

○ 2024 - present  
EASSET COMPANY LIMITED

### Full-Stack Developer

- Designed and developed a mobile application for credit card applications using React Native and TypeScript, focusing on user-friendly and responsive design.
- Integrated advanced features such as DIPChip technology for ID card scanning, QR code scanning, and facial recognition for seamless user verification.
- Implemented secure workflows, including email verification and OTP authentication, to ensure robust data security.
- Built and optimized backend systems with Java to handle form submissions and sensitive data efficiently.
- Developed a web-based system for managing internal workflows using React, TypeScript, and Fluent UI to deliver a clean and intuitive user interface.
- Built backend services with Java Spring Boot to support real-time data processing and secure operations.
- Implemented features for workflow management, including task assignment, tracking progress, and generating reports.
- Designed tools for log monitoring, system settings configuration, and managing user accounts and promotions, ensuring flexibility for admins.

○ 2023  
Car Rental Case Management Dashboard Project

### Front-end developer

- Created a dashboard for car rental operations using Next.js, TypeScript, and Material UI, delivering a streamlined user experience.
- Built backend functionality with Express.js for handling customer data, driver assignments, and rental case statuses.
- Developed a form for customers to input personal details, rental dates, and pickup/drop-off locations.
- Added admin tools for driver status management, case tracking, and generating detailed revenue and performance reports by day, month, and overall trends.

○ 2023  
POS Web Application for Pub Management

### Full-Stack Developer

- Built a POS system for pubs using React.js, Node.js, and MySQL, enabling efficient management of operations across various roles (admin, kitchen staff, cashier).
- Designed features for room booking, product sales, and in-room ordering to enhance customer convenience.
- Streamlined operations with a centralized dashboard for managing staff roles, monitoring sales, and tracking inventory.
- Developed reporting tools for analyzing sales data, identifying trends, and improving operational efficiency.
