# Chanakarn Susinraworn

## Full-Stack Developer

I'm a full-stack developer who loves building web products end-to-end — from client-facing apps to the backend systems and databases behind them. With experience across React, Next.js, NestJS, and Java, I enjoy solving real business problems and shipping solutions that just work.

## Experience

### 2025 - present

CODE PLAY COMPANY LIMITED

#### Full-Stack Developer

- Astralix — Client Intake & Requirement Scoping Form: 8-step wizard form with dynamic branching (6 scenarios), Zustand-backed auto-save, file uploads. Next.js/NestJS/Prisma/PostgreSQL/Zustand/Docker.
- SiPH Proud Point — Hospital Loyalty Platform: LINE LIFF member app (LINE login linked to hospital HN, campaigns, health surveys, daily check-ins, reward/lucky-draw redemption) + admin CRM for campaign and reward management. Built gamification (badges, leaderboard, point ledger) and server-side anti-abuse rules, with PDPA-compliant patient data handling. Next.js/NestJS/Prisma/PostgreSQL/LINE LIFF/Docker.
- Work Joy Station — Event Registration App: mobile-first 3-screen funnel, duplicate-prevention validation, deployed via Docker/Cloudflare Tunnel for a live HR Tech event. Next.js/NestJS/Prisma/PostgreSQL.
- Trident IMS — Internal Sales/Project/HR System: rebuilt legacy 8,000-line HTML app into full-stack Next.js/NestJS system, multi-tier approval workflows, automated project health scoring. Next.js/NestJS/TypeScript/Prisma/PostgreSQL/Docker.

### 2024 - 2025

EASSET COMPANY LIMITED

#### Full-Stack Developer

- Designed and developed a mobile application for credit card applications using React Native and TypeScript, focusing on user-friendly and responsive design
- Integrated advanced features including ID card scanning, QR code scanning, and facial recognition for seamless identity verification
- Implemented secure workflows including email verification and OTP authentication to ensure robust data security
- Built and optimized backend systems with Java Spring Boot to handle form submissions and sensitive data efficiently, supporting real-time processing and secure operations
- Developed a web-based internal workflow management system using React, TypeScript, and Fluent UI, delivering a clean and intuitive interface
- Implemented workflow management features including task assignment, progress tracking, and report generation
- Designed admin tools for log monitoring, system settings configuration, and managing user accounts and promotions

### 2023

Car Rental Case Management Dashboard Project

#### Front-end developer

- Built a car rental operations dashboard (Next.js, TypeScript, Material UI) with an Express.js backend for bookings, driver assignments, and case tracking
- Added admin tools for status management and revenue/performance reporting
